Profile

Full-stack developer, five years in TypeScript (React, Node, NestJS, PostgreSQL). I build business software end to end, from the interface to deployment. Today on a Swiss pension and wealth-planning platform; before that, three years at a bike-leasing start-up. I work with AI coding agents every day, and set up the codebase so they work well in it.

Highlights

- Swiss domain knowledge: retirement planning across the three pillars (LPP, 3a, 3b) and accounts for the self-employed.
- Technical owner of three modules at Zenride (Product, Finance, DevOps); first of 9 developers for features shipped and support resolved in H1 2025.
- AI-assisted development in a team: guides for agents, agents working in parallel, scheduled codebase audits.

Experience

Apptitude, Lausanne | Full-stack Developer
03.2026 – now | Digital agency | team of 2 developers

- Built retirement planning (LPP buy-backs per affiliation plan, 3a and 3b withdrawals, compared scenarios) and the balance sheet for self-employed clients.
- Built PDF reports and wealth dashboards: debt ratio and net yield for each property.
- Set up the codebase for AI agents (Claude Code, Codex): guides to our in-house libraries, several agents in parallel, scheduled security and performance audits.

Zenride, Paris | Full-stack Developer
01.2023 – 02.2026 | Employee bike leasing | 9 developers

- Technical owner of the Product, Finance and DevOps modules.
- Built, front and back end, the app with 4 portals (employees, employers, retailers, fleet) and the fleet management backend: contracts, payments, insurance.
- Set up deployment on Kubernetes (Docker, ArgoCD, OVHcloud) with Sentry monitoring.

Cagette & Paprika, Lille | Junior Full-stack Developer
09.2021 – 01.2023 | Grocery home delivery

- Ported the shop from PHP to React and TypeScript, and shipped the React Native app (iOS, Android).
- Built order management and delivery slot allocation, for hundreds of orders a day.

Side projects

- **Pomi** (github.com/Host-It-Labs/pomi): self-hosted focus app, one codebase for web, desktop and mobile, run as an automated pipeline: scheduled agent runs find the work, plan it and build it; I decide what ships.
- **Vikunja Voice Assistant** (github.com/NeoHuncho/vikunja-voice-assistant): open-source Home Assistant integration, 200+ installs.
- **GameHub** (github.com/Host-It-Labs/gamehub): tabletop games I design and build, playable in the browser against bots or friends.

Skills

- Languages and frameworks: TypeScript, React, Next.js, React Native, Node.js, NestJS, Express
- Data: PostgreSQL, MySQL, MongoDB, MikroORM, Sequelize
- Infrastructure and quality: Docker, Kubernetes, ArgoCD, CI/CD, Sentry, Playwright, Jest
- AI: Claude Code, Codex, MCP servers

Education

Bachelor of Commerce, major in Business Technology Management | Concordia University, Montreal | 2018 – 2021
Technical courses: application development, databases, information systems, IT security and audit. Also project management.

Certifications

Developer certifications: Responsive Web Design, JavaScript Algorithms and Data Structures | freeCodeCamp | 2021

Languages

French and English: native | German: A2 (school level)
