SENIOR FULL-STACK DEVELOPER · TYPESCRIPT

William Guinaudie.

Full-stack developer, five years in TypeScript (React, Node, NestJS, PostgreSQL). I build business software end to end, from the interface to deployment. Today on a Swiss pension and wealth-planning platform; before that, three years at a bike-leasing start-up. I work with AI coding agents every day, and set up the codebase so they work well in it.

01 EXPERIENCE

03.2026 – now
Current role
Lausanne, CH
Digital agency

Apptitude ↗ Full-stack Developer

Client projects, mainly a Swiss financial-planning platform for wealth advisors, built front to back in an Nx monorepo by a team of two developers.

LPP · 3a · 3b retirement planning **Front → back** Next.js, NestJS, PostgreSQL

WHAT I BUILT

- Retirement planning across the three pillars: LPP (pillar 2) buy-back potential and affiliation details per pension plan, 3a and 3b withdrawals, scenarios compared side by side.
- Balance sheet and operating account for the self-employed: depreciation, cash flow, interest, equity.
- A report module with PDF export, and wealth dashboards on AG Grid and AG Charts, down to each property's debt ratio and net yield.

AI AGENT TOOLING

- **Guides for agents:** no model has seen our in-house libraries, so I wrote guides in the repo that explain them. Team feedback becomes rules along the way (a bad call in a plan, a review comment), when it changes how the next agent works.
- **Several agents in parallel:** each works in its own copy of the repo (a git worktree), with its own environment and database copy, so each takes a task from start to finish, QA included, without getting in the others' way.
- **Scheduled audits:** agents go through the codebase for performance, security, bugs and code quality, and report each finding, with a plan, to one dashboard.

Next.js · React · NestJS · PostgreSQL · Claude Code · Codex · TanStack Query · MikroORM · AG Grid · Playwright

Employee bike leasing

Zenride ↗ Full-stack Developer

A fast-growing start-up with 9 developers. Front and back end of a platform for employees, employers, retailers and the fleet team. In H1 2025, first of the nine for features shipped and support resolved.

3 modules owned: Product, Finance, DevOps **4** portals in one app

WHAT I BUILT

- A multi-portal web app: employee leasing, retailer checkout, contracts and fleet dashboards.
- The fleet management backend: contract lifecycle, payments, insurance and third-party integrations.
- Containerised the infrastructure: Docker, Kubernetes and ArgoCD on OVH Cloud, with Sentry and Jest.
- Adopted AI coding tools early (GitHub Copilot, then Claude Code), with my own rules for AI reviews on pull requests.

React · Node · Express · MySQL · Docker · Kubernetes · ArgoCD · React Query · Sequelize · Sentry · Jest

Grocery home delivery

Cagette & Paprika ↗ Junior Full-stack Developer

A grocery delivery start-up, acquired by Auchan Retail, now ChronoDrive Livraison. I co-ran technical operations with a senior developer, across the whole product, from the shop to the delivery rounds.

100s of orders a day · **5** products shipped · **Auchan** acquired the company

WHAT I BUILT

- Ported the PHP shop to React and TypeScript, with new features and a better UX.
- A React Native shopping app for iOS and Android.
- The order management system, and slot allocation for efficient milkman-style delivery rounds.
- The Node and PHP backend on OVH, and the original WordPress and WooCommerce site.

React · React Native · TypeScript · Node · Express · MongoDB · Firebase · MySQL · Redux · Algolia · PHP

02 SIDE PROJECTS

Built for my own use, open source, with AI inside the product.

Pomi ↗

Web · Desktop · iOS · Android · Wear OS

A focus timer that knows what each session is for: a task said out loud becomes a clean task through AI. One codebase for every device, self-hosted.

- I set the priorities and review every pull request before it merges; scheduled agents plan and build features, fixes, performance and security work twice a day.

React · NestJS · PostgreSQL · Tauri · OpenRouter
github.com/Host-It-Labs/pomi

GameHub ↗

Web · Mobile

Original tabletop games I design and build. Play solo against bots, or with friends from an invite link.

- Agents test every change in a real browser on phone, tablet and desktop; bot-versus-bot simulations check a game's balance before a rule changes.

Next.js · React · three.js · Node · SQLite
github.com/Host-It-Labs/gamehub

Vikunja Voice Assistant ↗ — 2025 · 60+ stars · 200+ installs — A task said to Home Assistant, filed in Vikunja by AI.

Open source — 2024 - now — Merged pull requests in Vikunja, AFFiNE and Home Assistant.

Brawl Max — 2021 - 2022 — A React Native companion app for players, published on iOS and Android.

03 TOOLS I USE

AI-ASSISTED DEV	Claude Code · Codex · MCP servers · Agent guides and repo memory · Scheduled agent runs · Parallel agents in worktrees
FRONTEND	TypeScript · React · Next.js · React Native · Tauri · TanStack Query · MUI · AG Grid · Tailwind CSS
BACKEND	Node · NestJS · Express · PostgreSQL · MySQL · MongoDB · MikroORM · Sequelize · Python
INFRA & QUALITY	Docker · Kubernetes · ArgoCD · OVH · GCP · Firebase · Sentry · Playwright · Jest

04 EDUCATION AND CERTIFICATION

09.2018 - 05.2021
Montreal, CA

Bachelor of Commerce, major in Business Technology Management

Concordia University, John Molson School of Business

Technical courses: application development, databases, information systems, IT security and audit. Also project management.

07.2021
Online

Developer certifications: Responsive Web Design, JavaScript Algorithms and Data Structures

freeCodeCamp

About 300 hours each, verifiable at freecodecamp.org/neohuncho.

05 ALSO

INTERESTS — Mountains and outdoor sport · Hardware and self-hosting on my homelab · Designing tabletop games
