

William Guinaudie.

I build products with AI agents, and the workflows that make those agents reliable. Agents do the legwork; I make the engineering calls, review the code and ship it.

BASED IN
Lausanne, Switzerland

NATIONALITY
British and French

01 EXPERIENCE

03.2026 - now
Current role
Lausanne, CH
Digital agency

Apptitude AI Engineer · Full-stack Developer

Client projects, mainly a Swiss financial-planning platform for wealth advisors, built front to back in an Nx monorepo.

110+ merged pull requests in 6 months **Most** of the repo's agent tooling, built by me

WHAT I BUILT

- Wealth and retirement simulation across the Swiss three-pillar system, with quick actions like a new retirement date or municipality.
- Balance sheet and operating account for the self-employed: depreciation, cash flow, interest, equity.
- Wealth dashboards, pillar detail panels and PDF reports on AG Grid and AG Charts.

HOW I USED AI

- ♦ **Agent instructions and a selective repo memory:** only lessons that change how the next agent works, like lead-dev feedback or PR reviews. It is how agents learn in-house libraries no model has seen.
- ♦ **A worktree per agent,** with its own environment and database copy, so several agents each take a task through the full cycle, QA included.
- ♦ **A radar:** scheduled agents go through the codebase and report findings, each with a plan, to one dashboard. I decide what is worth doing.
- ♦ Experiments with long-running audits, multi-agent orchestration, evals and observability.

Next.js · React · NestJS · PostgreSQL · Claude Code · Codex · Nx · TanStack Query · MikroORM · AG Grid · Playwright

01.2023 - 02.2026
3 years 2 months
Paris, FR
Employee bike leasing

Zenride Full-stack Developer

A fast-growing start-up with 9 developers. Front and back end of a platform for employees, employers, retailers and the fleet team, with full technical ownership of the Product, Finance and DevOps modules.

580+ pull requests **#1** of 9 devs for features shipped and support resolved, H1 2025 **4** portals in one app

WHAT I BUILT

- A multi-portal web app: employee leasing, retailer checkout, contracts and fleet dashboards.
- The fleet management backend: contract lifecycle, payments, insurance and third-party integrations.
- Containerised the infrastructure: Docker, Kubernetes and ArgoCD on OVH Cloud, with Sentry and Jest.

HOW I USED AI

- ♦ **Where I started with AI:** GitHub Copilot, then Claude Code with Claude 3.5 Sonnet, and Opus 4 when it came out. Human in the loop: I steered every change and reviewed every line.
- ♦ **My first custom AI rules,** for automated AI reviews on pull requests and my everyday agent runs.
- ♦ **AI audits** to understand quickly the most sensitive parts of a large codebase and database.

React · Node · Express · MySQL · Docker · Kubernetes · ArgoCD · React Query · Sequelize · Sentry · Jest

Grocery home delivery

Cagette & Paprika Full-stack Developer

A grocery delivery start-up, acquired by Auchan Retail, now ChronoDrive Livraison. I co-ran technical operations with a senior developer, across the whole product, from the shop to the delivery rounds.

100s of orders a day 5 products shipped Auchan acquired the company

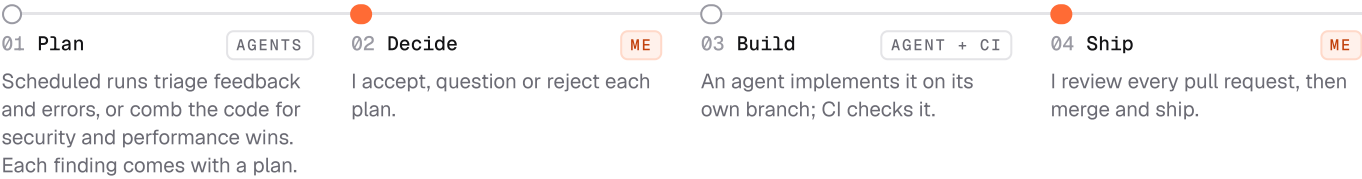

WHAT I BUILT

- Ported the PHP shop to React and TypeScript, with new features and a better UX.
- A React Native shopping app for iOS and Android.
- The order management system, and slot allocation for efficient milkman-style delivery rounds.
- The Node and PHP backend on OVH, and the original WordPress and WooCommerce site.

React · React Native · TypeScript · Node · Express · MongoDB · Firebase · MySQL · Redux · Algolia · PHP

02 HOW I WORK

Agents do the legwork. I make the calls.

03 SIDE PROJECTS

Built for my own use, and open source.

Pomi

Web · Desktop · iOS · Android · Wear OS

A focus timer that knows what you are focusing on: say a task out loud and AI turns it into a clean task. One codebase for every device, self-hosted.

- Built by scheduled agents: planning runs for features, bugs, performance and security, twice a day. I review every pull request before it merges.

React · NestJS · PostgreSQL · Tauri · OpenRouter
github.com/Host-It-Labs/pomi

GameHub

Web · Mobile

Original tabletop games I design and build. Play solo against bots, or with friends from an invite link.

- Agents test every change in a real browser on phone, tablet and desktop; bot-versus-bot simulations check a game's balance before a rule changes.

Next.js · React · three.js · Node · SQLite
github.com/Host-It-Labs/gamehub

Vikunja Voice Assistant

2025 · 60+ stars · 200+ installs Say a task to Home Assistant and AI files it in Vikunja.

Open source

2024 - now Merged pull requests in Vikunja, AFFiNE and Home Assistant.

Brawl Max

2021 - 2022 A React Native companion app for players, published on iOS and Android.

04 TOOLS I USE

AI ENGINEERING

Claude Code · Codex · MCP servers · Agent instructions and repo memory · Scheduled agent runs · Parallel agents in worktrees

FRONTEND

TypeScript · React · Next.js · React Native · Tauri · TanStack Query · MUI · AG Grid · Tailwind CSS

BACKEND

Node · NestJS · Express · PostgreSQL · MySQL · MongoDB · MikroORM · Sequelize · Redis · Python

INFRA & QUALITY

Docker · Kubernetes · ArgoCD · OVH · GCP · AWS · Firebase · Sentry · Playwright · Jest

05 EDUCATION

09.2018 - 06.2021
Montreal, CA

Bachelor of Business Technology Management

Concordia University, John Molson School of Business

Major GPA 3.8 / 4.2. Application development, databases, project management, information systems, IT security and audit.

06.2019 - 07.2021
Online

Full Stack Developer certification

freeCodeCamp

Algorithms, databases, React, and back-end development with Node and Express.

06 ALSO

INTERESTS

Mountains and outdoor sport · Hardware and self-hosting on my homelab · Designing tabletop games
