FULL-STACK DEVELOPER · AI ENGINEER

William Guinaudie.

I build software with AI agents, and the setup that lets them work well in a real codebase.

01 EXPERIENCE

03.2026 - now
Current role
Lausanne, CH
Digital agency

Apptitude ↗ Full-stack Developer · AI Engineer

Client projects, mainly a Swiss financial-planning platform for wealth advisors, built front to back in an Nx monorepo.

110+ merged pull requests in 6 months · **Most** of the repo's agent tooling, built by me

WHAT I BUILT

- Retirement planning across the Swiss three pillars: pillar 2 buy-back potential and affiliation details per plan, 3a and 3b withdrawals, scenarios compared side by side.
- Balance sheet and operating account for the self-employed: depreciation, cash flow, interest, equity.
- A report module with PDF export, and wealth dashboards on AG Grid and AG Charts, down to each property's debt ratio and net yield.

HOW I USED AI

- **Teaching agents our codebase:** no model has seen our in-house libraries, so I wrote guides in the repo that explain them. Team feedback becomes rules along the way (a bad call in a plan, a review comment), but only when it changes how the next agent works.
- **Several agents in parallel:** each works in its own copy of the repo (a git worktree), with its own environment and database copy, so each takes a task from start to finish, QA included, without getting in the others' way.
- **A radar:** scheduled agents go through the codebase for performance, security, bugs and code quality, and report each finding, with a plan, to one dashboard. I decide what is worth doing.
- Experiments with long-running audits, multi-agent orchestration, evals and observability.

Next.js · React · NestJS · PostgreSQL · Claude Code · Codex · Nx · TanStack Query · MikroORM · AG Grid · Playwright

01.2023 - 02.2026

Paris, FR
Employee bike leasing

Zenride ↗ Full-stack Developer

A fast-growing start-up with 9 developers. Front and back end of a platform for employees, employers, retailers and the fleet team, with full technical ownership of the Product, Finance and DevOps modules.

580+ pull requests · **#1** of 9 devs for features shipped and support resolved, H1 2025 · **4** portals in one app

WHAT I BUILT

- A multi-portal web app: employee leasing, retailer checkout, contracts and fleet dashboards.
- The fleet management backend: contract lifecycle, payments, insurance and third-party integrations.
- Containerised the infrastructure: Docker, Kubernetes and ArgoCD on OVH Cloud, with Sentry and Jest.

HOW I USED AI

- **Where I started with AI:** GitHub Copilot, then Claude Code with Claude 3.5 Sonnet, and Opus 4 when it came out. Human in the loop: I steered every change and reviewed every line.
- **My first custom AI rules**, for automated AI reviews on pull requests and my everyday agent runs.
- **AI audits** to understand quickly the most sensitive parts of a large codebase and database.

React · Node · Express · MySQL · Docker · Kubernetes · ArgoCD · React Query · Sequelize · Sentry · Jest

Grocery home delivery

Cagette & Paprika ↗ Full-stack Developer

A grocery delivery start-up, acquired by Auchan Retail, now ChronoDrive Livraison. I co-ran technical operations with a senior developer, across the whole product, from the shop to the delivery rounds.

100s of orders a day · **5** products shipped · **Auchan** acquired the company

WHAT I BUILT

- Ported the PHP shop to React and TypeScript, with new features and a better UX.
- A React Native shopping app for iOS and Android.
- The order management system, and slot allocation for efficient milkman-style delivery rounds.
- The Node and PHP backend on OVH, and the original WordPress and WooCommerce site.

React · React Native · TypeScript · Node · Express · MongoDB · Firebase · MySQL · Redux · Algolia · PHP

02 HOW I WORK

Agents bring me plans, and I choose which ones get built.

01 Plan AGENTS
Scheduled runs triage feedback and errors, or comb the code for security and performance wins. Each finding comes with a plan.

02 Decide ME
I accept, question or reject each plan.

03 Build AGENT + CI
An agent implements it on its own branch; CI checks it.

04 Ship ME
I review the changes, then merge and ship.

03 SIDE PROJECTS

Built for my own use, open source, with AI inside the product.

Pomi ↗

Web · Desktop · iOS · Android · Wear OS

A focus timer that knows what you are focusing on: say a task out loud and AI turns it into a clean task. One codebase for every device, self-hosted.

- Built by scheduled agents: planning runs for features, bugs, performance and security, twice a day. I review every pull request before it merges.

React · NestJS · PostgreSQL · Tauri · OpenRouter
github.com/Host-It-Labs/pomi

GameHub ↗

Web · Mobile

Original tabletop games I design and build. Play solo against bots, or with friends from an invite link.

- Agents test every change in a real browser on phone, tablet and desktop; bot-versus-bot simulations check a game's balance before a rule changes.

Next.js · React · three.js · Node · SQLite
github.com/Host-It-Labs/gamehub

Vikunja Voice Assistant ↗ 2025 · 60+ stars · 200+ installs — Say a task to Home Assistant and AI files it in Vikunja.

Open source 2024 - now — Merged pull requests in Vikunja, AFFiNE and Home Assistant.

Brawl Max 2021 - 2022 — A React Native companion app for players, published on iOS and Android.

04 TOOLS I USE

AI ENGINEERING	Claude Code · Codex · MCP servers · Agent instructions and repo memory · Scheduled agent runs · Parallel agents in worktrees
FRONTEND	TypeScript · React · Next.js · React Native · Tauri · TanStack Query · MUI · AG Grid · Tailwind CSS
BACKEND	Node · NestJS · Express · PostgreSQL · MySQL · MongoDB · MikroORM · Sequelize · Redis · Python
INFRA & QUALITY	Docker · Kubernetes · ArgoCD · OVH · GCP · AWS · Firebase · Sentry · Playwright · Jest

05 EDUCATION

09.2018 - 06.2021
Montreal, CA

Bachelor of Business Technology Management

Concordia University, John Molson School of Business

Major GPA 3.8 / 4.2. Application development, databases, project management, information systems, IT security and audit.

06.2019 - 07.2021
Online

Full Stack Developer certification

freeCodeCamp

Algorithms, databases, React, and back-end development with Node and Express.

06 ALSO

INTERESTS	Mountains and outdoor sport · Hardware and self-hosting on my homelab · Designing tabletop games
